Summary

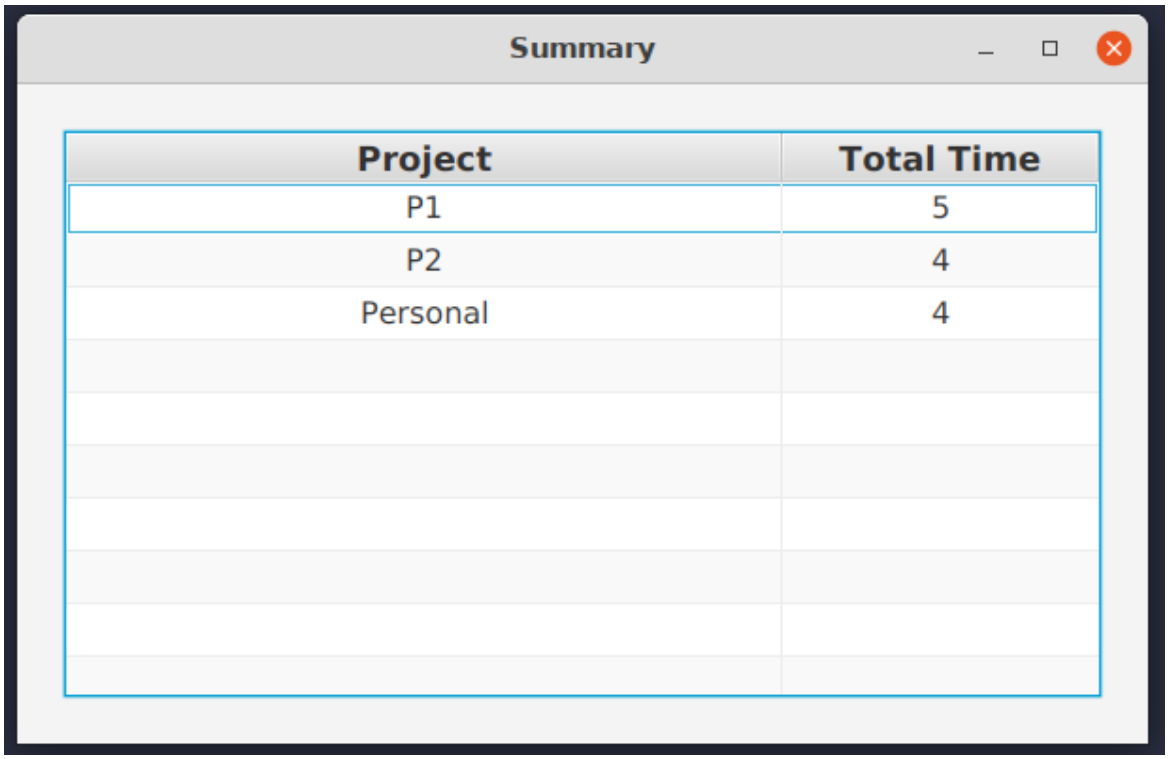
There are changes:

- Instead of having a 5th column for the action button (Stop/Resume), I decided to have only one universal button at the bottom. This is because the 5th column will make everything cramped. The Stop button will be disabled by default. It will be enabled once the use choose a row in the table. There will be no Resume button, unlike what I have planned to do before as user could add another record with the same Project Name to accumulate the total time (see the overview table above and the summary table below for details)



=> Overview table sketch and JavaFX View have no difference.
